

Week Report 7

Discussion Board post

The screenshot shows a web browser window with multiple tabs open. The active tab is titled "Discussion" and is part of "Week Report 7 | Linux FU". The URL is pcc.blackboard.com/ultra/courses/_47634_1/engagement/discussion/_3346300_1/view=discussions&courseId=_47634_1. The page displays a discussion board interface with a sidebar on the left and a main content area. A purple box highlights a note at the top of the main area:

You must reply to one of your colleagues' posts. You will only receive full credit if you create a thread and then reply to someone else's thread.

- You are allowed to delete your own posts as long as no one has replied to them yet.
- You are allowed to edit your own posts.
- You are not allowed to attach files.
- If you do not know how to create a thread or work with discussion boards, ask me and we can have a video call.

Below this note is a text input field labeled "Post a response to the discussion" and a "Post" button. A user profile picture and name "Joaquin Sanchez" are shown, along with the date "Nov 21, 2025 10:52 PM". The main post content is as follows:

After looking through the each manufacturers products I settled on the Adder WS for the price point of \$2,164. While each competitor had something that could be matched in specs and price or sometimes even beat the price point I feel like the security, customization, and the big push for the right to repair with customer support is a huge plus. Specs wise this laptop is running 16gb ddr5 ram, 1tb nvme, wifi 7/ethernet, 2 usb A ports, 2 type c ports, a 5070, 1 hdmi port and 2 display ports. As I mentioned before security on this laptop is pretty top notch with pop os full disk encryption and the option to remove the mic and camera is amazing. For Joseph since we're only running some light games the 5070 is a bit overkill but will futureproof his curiosity for other games and since we are running some vms and editing on here which can be very cpu intensive as well as memory intensive we will have plenty of headroom. The ultra 9 would be more than enough for all of his tasks but with 16gb of ram he MIGHT run into slow down if he has some tabs open while editing but with this laptop we have the ability to go up to 96gb in the future. Overall I say that this laptop is a solid investment as he has plenty of options to choose from when it comes to upgrading which means that he isn't stuck with soldered on ram or only one nvme slot.

A reply from "Jorge Leon" dated "Nov 11, 2025 9:01 PM" is shown:

In my opinion, Adder WS from System76.com (with a few add-ons) would be a reliable laptop with lot of memory, high quality graphics and a high performance processor. Our final price comes up to \$2,504, slightly over the budget but it will definitely be worth it.

Already included with the laptop is the following:

- 24-core Intel processor
- Thunderbolt port
- 1 TB SSD
- Ethernet port
- 2 USB ports
- 1 HDMI, 2 DisplayPorts

I've customized Joseph's laptop with the following add-ons for an even better performance:

- 96 GB Memory - to handle software that demands a large RAM to run efficiently
