

Github repository

The screenshot shows a GitHub repository page for 'NginxServer'. The repository is public and has 1 branch and 0 tags. The main branch contains 2 commits from 'root' made 4 minutes ago. The commits are: 'Initial commit' (docs), 'Initial commit' (nginx), 'Initial commit' (site), and 'Initial commit' (README.md). The README file contains the following content:

```
===== ZebraMedAI - Proxmox LXC Nginx Web Server

Project Overview

This project demonstrates how to deploy a publicly accessible and secure web server using a Proxmox LXC container running Ubuntu 24.04 and Nginx. The server hosts a placeholder website and is reachable from the internet using a custom domain and HTTPS.

Technologies Used

Proxmox VE
LXC Container
Ubuntu 24.04 LTS
Nginx
UFW Firewall
DNS and Port Forwarding
HTTPS (SSL/TLS)
```

The repository also includes sections for About (no description, website, or topics provided), Releases (no releases published), Packages (no packages published), Languages (HTML 100.0%), and Suggested workflows (Jekyll using Docker image and SLSA Generic generator).

The screenshot shows a browser window displaying the website at zebamedai.com. The page content is identical to the GitHub README, confirming that the deployment was successful.

It works!

Hosted on Nginx (Ubuntu 24.04) inside a Proxmox container.
